

ABSTRACT

The invention relates to a building transportable by water, which comprises means for the transport thereof and transport premises for the accommodation of the transport personnel during the transport, which premises meet the

5 safety regulations required of waterborne vessels. The building further comprises functional premises to be reserved by clients, which premises are dimensioned for a maximum number of clients C, and which do not meet the safety regulations required of waterborne vessels. The invention further

10 relates to a method for arranging the delivery of the building to a desired location, a reservation system for the premises and a method for reserving the premises.
